Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

```

#### **Define Graphing Function**

In this section, we define the function make\_graph. You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```
def make graph(stock data, revenue data, stock):
    fig = make subplots(rows=2, cols=1, shared xaxes=True,
subplot titles=("Historical Share Price", "Historical Revenue"),
vertical spacing = .3)
    stock data specific = stock data[stock data.Date <= '2021--06-14']
    revenue data specific = revenue data[revenue data.Date <= '2021-
04-30'1
fig.add trace(go.Scatter(x=pd.to datetime(stock data specific.Date,
infer datetime format=True),
y=stock data specific.Close.astype("float"), name="Share Price"),
row=1, col=1)
fig.add trace(go.Scatter(x=pd.to datetime(revenue data specific.Date,
infer datetime format=True),
y=revenue_data_specific.Revenue.astype("float"), name="Revenue"),
row=2, col=1)
    fig.update xaxes(title text="Date", row=1, col=1)
    fig.update_xaxes(title_text="Date", row=2, col=1)
    fig.update yaxes(title text="Price ($US)", row=1, col=1)
    fig.update yaxes(title text="Revenue ($US Millions)", row=2,
col=1)
    fig.update layout(showlegend=False,
    height=900,
    title=stock,
    xaxis rangeslider visible=True)
    fig.show()
```

### **Question 1: Use yfinance to Extract Stock Data**

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is TSLA.

```
tesla = yf.Ticker("TSLA")
```

Using the ticker object and the function history extract stock information and save it in a dataframe named tesla\_data. Set the period parameter to max so we get information for the maximum amount of time.

```
tesla data = tesla.history(period="max")
```

**Reset the index** using the reset\_index(inplace=True) function on the tesla\_data DataFrame and display the first five rows of the tesla\_data dataframe using the head function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```
tesla data.reset index(inplace=True)
tesla data.head()
                                                Close
                                                          Volume
        Date
                  0pen
                            High

# **Question 2: Use Webscraping to Extract Tesla Revenue Data**

Use the requests library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/revenue.htm Save the text of the response as a variable named html data.

```
url = "https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue"
html data = requests.get(url).text
```

Parse the html data using beautiful soup.

0.0

0.0

0.0

0.0

1 2

3

4

```
soup = BeautifulSoup(html data, "html5lib")
```

Using BeautifulSoup or the read\_html function extract the table with Tesla Quarterly Revenue and store it into a dataframe named tesla\_revenue. The dataframe should have columns Date and Revenue.

```
tesla_revenue = pd.DataFrame(columns=['Date', 'Revenue'])
for table in soup.find_all('table'):
    if ('Tesla Quarterly Revenue' in table.find('th').text):
        rows = table.find_all('tr')
```

```
for row in rows:
    col = row.find_all('td')

if col != []:
    date = col[0].text
    revenue = col[1].text.replace(',','').replace('$','')

tesla_revenue = tesla_revenue.append({"Date":date,
"Revenue":revenue}, ignore index=True)
```

Execute the following line to remove the comma and dollar sign from the Revenue column.

```
tesla_revenue["Revenue"] = tesla_revenue['Revenue'].str.replace(',|\
$',"")
```

/home/jupyterlab/conda/envs/python/lib/python3.7/site-packages/ipykernel\_launcher.py:1: FutureWarning: The default value of regex will change from True to False in a future version.
"""Entry point for launching an IPython kernel.

Execute the following lines to remove an null or empty strings in the Revenue column.

```
tesla_revenue = tesla_revenue[tesla_revenue['Revenue'] != ""]
```

Display the last 5 row of the tesla\_revenue dataframe using the tail function. Take a screenshot of the results.

```
tesla revenue.tail()
```

	Date	Revenue
49	2010-09-30	31
50	2010-06-30	28
51	2010-03-31	21
53	2009-09-30	46
54	2009-06-30	27

### **Question 3: Use yfinance to Extract Stock Data**

tesla revenue.dropna(inplace=True)

Using the Ticker function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its ticker symbol is GME.

```
GameStop = yf.Ticker("GME")
```

Using the ticker object and the function history extract stock information and save it in a dataframe named gme\_data. Set the period parameter to max so we get information for the maximum amount of time.

```
gme data = GameStop.history(period="max")
```

**Reset the index** using the reset\_index(inplace=True) function on the gme\_data DataFrame and display the first five rows of the gme\_data dataframe using the head function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

```
gme data.reset index(inplace=True)
gme data.head()
                                                Close
                                                          Volume
        Date
                  0pen

#### **Question 4: Use Webscraping to Extract GME Revenue Data**

Use the requests library to download the webpage https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html. Save the text of the response as a variable named html data.

```
url = "https://cf-courses-data.s3.us.cloud-object-
storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN-
SkillsNetwork/labs/project/stock.html"

html data = requests.get(url).text
```

```
Parse the html data using beautiful_soup.
```

```
soup = BeautifulSoup(html_data,"html5lib")
```

Using BeautifulSoup or the read\_html function extract the table with GameStop Quarterly Revenue and store it into a dataframe named gme\_revenue. The dataframe should have columns Date and Revenue. Make sure the comma and dollar sign is removed from the Revenue column using a method similar to what you did in Question 2.

```
gme revenue = pd.DataFrame(columns=['Date', 'Revenue'])
```

```
for table in soup.find_all('table'):
    if ('GameStop Quarterly Revenue' in table.find('th').text):
        rows = table.find_all('tr')

        for row in rows:
            col = row.find_all('td')

        if col != []:
            date = col[0].text
            revenue = col[1].text.replace(',','').replace('$','')

            gme_revenue = gme_revenue.append({"Date":date,"Revenue":revenue}, ignore_index=True)
```

Display the last five rows of the gme\_revenue dataframe using the tail function. Take a screenshot of the results.

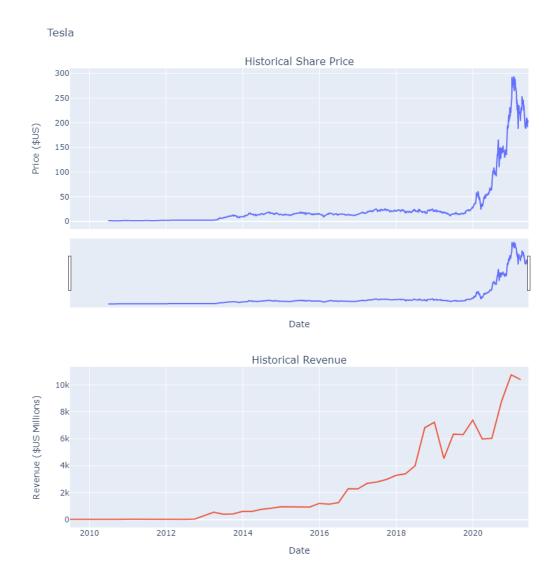

```
gme_revenue.tail()

Date Revenue
57 2006-01-31 1667
58 2005-10-31 534
59 2005-07-31 416
60 2005-04-30 475
61 2005-01-31 709
```

## **Question 5: Plot Tesla Stock Graph**

Use the make\_graph function to graph the Tesla Stock Data, also provide a title for the graph. The structure to call the make\_graph function is make\_graph(tesla\_data, tesla revenue, 'Tesla'). Note the graph will only show data upto June 2021.

```
make graph(tesla data, tesla revenue, "Tesla")
```

# **Question 6: Plot GameStop Stock Graph**

Use the make\_graph function to graph the GameStop Stock Data, also provide a title for the graph. The structure to call the make\_graph function is make\_graph(gme\_data, gme\_revenue, 'GameStop'). Note the graph will only show data upto June 2021.

make\_graph(gme\_data, gme\_revenue, 'GameStop')

#### GameStop

Joseph Santarcangelo has a PhD in Electrical Engineering, his research focused on using machine learning, signal processing, and computer vision to determine how videos impact human cognition. Joseph has been working for IBM since he completed his PhD.
